Cyrg energy
Turn waste into useful power

Turboden Organic Rankine Cycle (ORC) technology can be profitably and efficiently used to produce electric and thermal power from waste and to enhance the efficiency of existing waste to energy plants.

Turboden ORC turbogenerators in this application are able to produce up to 40 MW of electric power per single generator.

**MUNICIPAL SOLID WASTE**
- Food waste
- Refuse-derived fuel (RDF)
- Solid recovered fuel (SRF)
- Plastic

**ANIMAL WASTE**
- Chicken manure
- Other animal manure
- Dairy operation waste
- Animal by-products

**SEWAGE SLUDGE**
- Municipal wastewater
- Industrial wastewater

**INDUSTRIAL AND HAZARDOUS WASTE**
- Hospital & Medical
- Chemical
- Pulp & Paper
- Tires
- Industrial by-products

ELECTRIC POWER and THERMAL POWER
Make your business more sustainable

Designed according to specific client requirements, the ORC-based Waste to Energy plant is able to produce electric power only with an electrical efficiency up to 30% or Combined Heat & Power (CHP). Depending on specific characteristics of the waste, various waste combustion technologies and heat recovery exchangers may be employed.

**POWER ONLY**: generation of electric power only with no condensing heat valorization.

**CHP**: generation of heat and electric power.

Example of a small-medium decentralized Waste to Energy plant integrated with a Turboden ORC system.

* ORC system can produce hot water, steam or hot oil.
Why choose Turboden for decentralized Waste to Energy?

- GENERATE PROFIT FROM WASTE, VALORIZING HEAT AND POWER
- REDUCE VOLUME OF WASTE AND ITS COST OF DISPOSAL
- ENHANCE WASTE LOGISTICS, WITH LOWER ROAD TRANSPORT
- REDUCE CO₂ EMISSIONS, IMPROVING COMPANY SUSTAINABILITY
- GET ACCESS TO A SIMPLIFIED AUTHORIZATION PROCESS

- ease of integration and high reliability (98% availability)
- electrical efficiency up to 30%
- low footprint and environmental impact
- automatic operation with no operator attendance required
- no water consumption, low maintenance required
The ORC turbogenerator makes use of a closed thermodynamic cycle to convert heat into electricity. The thermal power recovered from waste combustion vaporizes a suitable organic working fluid, which then expands through the turbine and produces clean and reliable electric power through the alternator. Thanks to the regenerator, internal heat recovery takes place improving the cycle efficiency. Downstream from the regenerator, the organic vapor is condensed and pumped back to start the cycle again. The heat from condensation can either be used by the heat users or dissipated.

The heat from waste combustion is transferred to the ORC working fluid by means of an intermediate circuit or directly via the combustion gases in direct exchange systems. The media used in the intermediate circuits are thermal oil, saturated steam or superheated water.

* ORC system can produce hot water, steam or hot oil.
From words to deeds

GÜRES - TURKEY
- SIZE: 2.3 MWe
- STATUS: in operation since 2018
- APPLICATION: CHP in an egg production facility
- WASTE: chicken litter

SUEZ INTERNATIONAL - ROMANIA
- SIZE: 2 x 0.6 MWe
- STATUS: under construction
- APPLICATION: power generation from sludge incineration in a wastewater treatment plant
- WASTE: sewage sludge

MIROM ROESELARE - BELGIUM
- SIZE: 3 MWe
- STATUS: in operation since 2008
- APPLICATION: power generation from a waste incineration plant
- WASTE: municipal solid waste

ENERGY FROM WASTE - TURKEY
- SIZE: 12.8 MWe
- STATUS: in operation since 2020
- APPLICATION: power generation from gasification of RDF and biomass
- WASTE: refused-derived fuel (RDF) and biomass
ENERGY FROM WASTE - TAIWAN
- SIZE: 10 MWe
- STATUS: in operation since 2021
- APPLICATION: power generation from a waste incineration plant
- WASTE: waste from paper industry

THE CORPORATION OF THE CITY OF LONDON - CANADA
- SIZE: 0.6 MWe
- STATUS: in operation since 2021
- APPLICATION: power generation from a fluidized bed incineration plant
- WASTE: sewage sludge

ITC - TURKEY
- SIZE: 2 X 5.3 MWe
- STATUS: in operation since 2014 - 2015
- APPLICATION: power generation from a waste gasification plant
- WASTE: industrial waste

PROMONT - POLAND
- SIZE: 1 MWe
- STATUS: in operation since 2018
- APPLICATION: power generation from a waste incineration plant
- WASTE: plastic and hospital waste
Turboden, a group company of Mitsubishi Heavy Industries, is an Italian firm and a global leader in the design, manufacture and maintenance of Organic Rankine Cycle (ORC) systems, highly suitable for distributed power generation. ORC systems can generate electric and thermal power exploiting multiple sources, such as renewables (biomass, geothermal energy, solar energy), traditional fuels and waste heat from industrial processes, waste incinerators, engines or gas turbines.

Mitsubishi Heavy Industries, Ltd. (MHI), headquartered in Tokyo, is one of the world’s leading industrial firms with 80,000 group employees and annual consolidated revenues of around 38 billion U.S. dollars (year 2018). For more than 130 years, the company has channeled big thinking into innovative and integrated solutions that move the world forward. MHI owns a unique business portfolio covering land, sea, sky and even space. MHI delivers innovative and integrated solutions across a wide range of industries from commercial aviation and transportation to power plants and gas turbines, and from machinery and infrastructure to integrated defense and space systems.

**Why Turboden?**

**PART OF MITSUBISHI HEAVY INDUSTRIES GROUP**

Turboden benefits from the Mitsubishi Heavy Industries global network in a number of ways, including: financial stability, sharing of business practices (including customer warranties) and technology development.

**CAPABILITIES & EXPERIENCE**

With 40+ years of experience, a global presence, 750+ MWe installations, and 400+ plants in 50 countries, Turboden is a market leader in the proprietary design and manufacturing of ORC optimized turbines.

**CUSTOMER ORIENTATION**

Optimized solutions for each customer and a qualified service department exclusively dedicated to customer assistance.
Feel our strengths

**FLEXIBILITY**
- Range size up to 20 MW per single shaft
- Different primary energy sources
- Large rangeability
- Cogeneration or power-only mode
- Ease of integration
- Island mode

**RELIABILITY**
- High availability (98%+)
- Long life

**SUSTAINABILITY**
- Core system for renewable energy and energy efficiency
- Clean generation of power and heat
- Reduction of CO₂ emissions

**EASY TECHNOLOGY**
- Simple technical features: low pressures involved, low speed turbine, limited number of stages of the turbine (≤6), self-lubricating fluids, no water required
- Easy and cost-effective operation & maintenance: automatic operation (no qualified operator required), minimal maintenance activities, no major overhaul (turbine not subject to erosion or corrosion), fast start-stop procedures, no chemical and water treatments, low refilling of fluid required
Always by your side

24/7 SUPPORT*  <2h REACTION TIME  97% PLANTS WITH AFTER-SALES CONTRACTS

GLOBAL COVERAGE
- 2 service subsidiaries and 5 international service partner companies

CUSTOMIZED SERVICES
- single contact for requests for support
- staff dedicated to on-site and remote technical support
- assistance of an international network of companies able to provide technical support
- wide range of services provided
- prompt assistance and customized after-sales services
- remote technical support using innovative tools
- dedicated spare parts warehouse
Meet our global and proven experience
